¹⁾ The nominal proportioning rate is achieved when reaching the specified minimum figure. Indication for proportioning of fluid Newtonian foam agents at operating pressure of 5 bar. For more detailed information, refer to page 2, item 3. "Minimum water flow rate".

Issued/modified: A. Hulinsky on: 20.01.2021 Version no.: 06 Approved: A. Hulinsky on: 20.01.2021

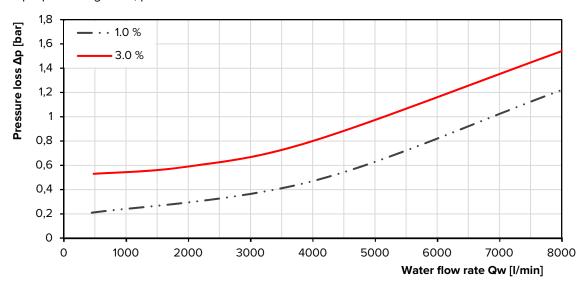

²⁾ For information regarding FM Approved data, please refer to www.approvalguide.com.

³⁾ Operating temp. is the max. ambient and medium (foam and extinguishing water) temperature. Max. foam agent temp. is generally limited to 50 °C. 4) Weight indications are based upon the standard version in dry condition. Special versions will differ.

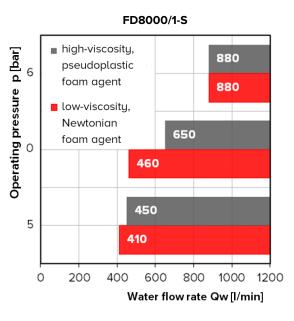

2. PRESSURE LOSS.

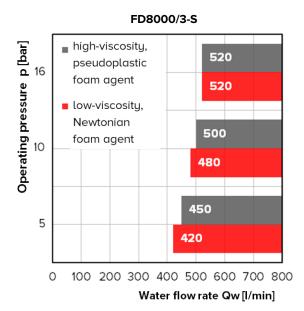

Indication valid for operating pressure of 10 bar. For more information on different system conditions or proportioning rates, please contact us.

3. MINIMUM WATER FLOW RATE.

The following diagrams show the effect of the operating pressure and foam agent viscosity on the minimum water flow rate (valid for viscosities in the graph at para. 4).

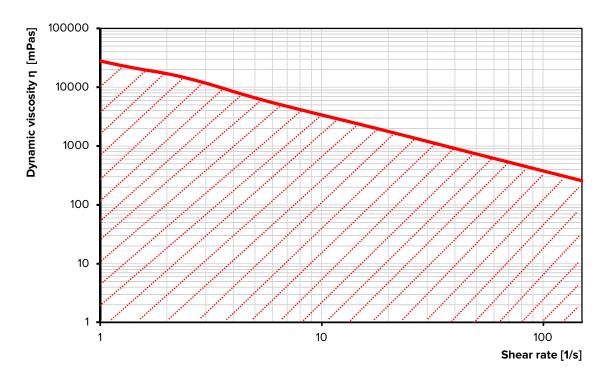

Comment:

The values can be reduced to approx. 35% by an optional flow reduction. The values increase by approx. 40% in the high-temp version. For values at other proportioning rates, please contact us.

4. FOAM AGENT VISCOSITY.

FireDos proportioners are suitable for all foam agents available on the market. For reference regarding units with an FM Approval, please find the corresponding/associated range of dynamic viscosity below (www.approvalguide.com). Contact us if the dynamic viscosity of your foam agent is higher than the values in the diagram. **Do not hesitate to request our support for the correct dimensioning of your suction line.**
